

I'm a customer of XM Satellite Radio as I find that they offer great variety over local "regular" radio listening. THE XM Instant Traffic & Weather reports is absolutely great!

I just recently heard about the petition the National Association of Broadcasters has created and I cannot express enough how strongly against I feel about it. I believe that petition goes against our first admendment rights which I believe to be the one the most fundamental. Furthermore, I don't think that it is fair for the NAB to dictate what types of service should be available to satellite radio escpecially when this is a service paid for by the consumers. I respectfully urge you to reject NAB's petition 04-160.

Thank you for your time.
